

**ABSTRACT OF THE DISCLOSURE**

A liquid crystal display device that is adapted for preventing a damage and a wrinkle of optical sheets caused by vibration or external impact. In the device, optical sheets are included in a backlight assembly. A main frame is mounted with the backlight assembly.

- 5 At least one shaft is installed at the main frame to fix the optical sheets thereon. Accordingly, the optical sheets resist damage, such as a scratch, etc. caused by a motion of the liquid crystal display or external vibration. Furthermore, wrinkling of the optical sheets in a high temperature environment is minimized.
